1. Leitura & compreensão

- Leiam e sublinhem ideias/frases que poderiam ser transformadas para o futuro (por exemplo previsões, implicações futuras, sugestões de pesquisa futura).

Abstract

Objective: This study aimed to analyze parents' perceptions regarding adolescents' screen use, signs of screen dependency, and its impact on sleep among 10- to 16-year-olds in the district of Leiria, Portugal. A descriptive–correlational, cross–sectional study was conducted in April 2024 using an online questionnaire completed by a non-probabilistic accidental sample of 616 parents or legal guardians. Nearly half of the respondents (48.2%) perceived adolescents as dependent on screens, while 68.7% believed that their screen time was excessive. Several behavioural signs consistent with digital dependence were reported. Increased screen use was significantly associated with shorter sleep duration, daytime sleepiness, and difficulties initiating sleep. Although many adolescents still achieved the recommended number of hours of sleep, those perceived as screen-dependent were more likely to experience compromised sleep quality and quantity. These findings reinforce the growing concern about adolescents' digital habits and underscore the importance of implementing targeted health promotion strategies focused on responsible screen use and sleep hygiene among school-aged youth.

Keywords: adolescent; parents; screen time; sleep; digital addiction; nursing

2. Identificação de possíveis frases de futuro

- Mesmo que no Abstract não haja will, identifique trechos onde faz sentido expressar intenção futura.
- Exemplos possíveis: implicações para políticas futuras, necessidade de estudos posteriores, impacto esperado, etc.
 - “These findings reinforce the growing concern about adolescents' digital habits”
 - “...underscore the importance of implementing targeted health promotion strategies...”
 - “...focused on responsible screen use and sleep hygiene among school-aged youth.”
 - “Increased screen use was significantly associated with shorter sleep duration, daytime sleepiness, and difficulties initiating sleep.”

- “Those perceived as screen-dependent were more likely to experience compromised sleep quality and quantity.”
- “These findings reinforce the growing concern (...) and underscore the importance of implementing (...) strategies.”
- **Todo o trecho final:**
“These findings (...) underscore the importance of implementing targeted health promotion strategies...”

3. Reescrita: transformar em simple future

- Para cada trecho selecionado, escreva uma frase afirmativa no simple future.
- Exemplo: “The study will inform guidelines for screen time regulation.”

- Depois converta em negativa: “The study _____ ...”
- E em interrogativa: “ _____...?”

Trecho 1: Ideia original:

“These findings reinforce the growing concern about adolescents’ digital habits.”

- **Afirmativa (simple future)**
 - “These findings will increase the concern about adolescents’ digital habits.”
- **Negativa**
 - “These findings will not increase the concern about adolescents’ digital habits.”
- **Interrogativa**
 - “Will these findings increase the concern about adolescents’ digital habits?”

Trecho 2: Ideia original:

“...underscore the importance of implementing targeted health promotion strategies...”

- **Afirmativa**
 - “Health promotion strategies will be implemented to address adolescents’ screen use and sleep habits.”
- **Negativa**
 - “Health promotion strategies will not be implemented to address adolescents’ screen use and sleep habits.”
- **Interrogativa**
 - “Will health promotion strategies be implemented to address adolescents’ screen use and sleep habits?”

Trecho 3: Ideia original:

“Increased screen use was associated with shorter sleep duration...”

- **Afirmativa**
 - “Increased screen use will continue to affect adolescents’ sleep duration.”
- **Negativa**
 - “Increased screen use will not continue to affect adolescents’ sleep duration.”
- **Interrogativa**
 - “Will increased screen use continue to affect adolescents’ sleep duration?”

Trecho 4: Ideia original:

“Those perceived as screen-dependent were more likely to experience compromised sleep...”

- **Afirmativa**
 - “Screen-dependent adolescents will experience compromised sleep quality and quantity.”
- **Negativa**
 - “Screen-dependent adolescents will not experience compromised sleep quality and quantity.”
- **Interrogativa**
 - “Will screen-dependent adolescents experience compromised sleep quality and quantity?”
